鉅€鉅€浜哄伐鏃鸿迨鑽勸璠鉅困紕鉅困罇鍒燂owilltheAIaffectourlife?

鉅€鉅€The Robot is the most direct embodiment of artificial intelligence. There are a lot of robots in our lives that help us. For example:

鉅€鉅€A robot that can sweep the floor: It can automatically complete the floor cleaning work in the room. Generally, brush and vacuum, the ground debris into its own storage boxes, thereby completing the function of cleaning the ground, is a good help for busy office workers.

鉬€鉬€Robot capable of operation: In May 2015, a segment of the robot cut the grapes and cut the grapes into the perfect stitching of the video on the Internet became popular, people are very surprised. Yes, that is the "Da Vinci" surgical robot. Da Vinci surgical robot for telemedicine minimally invasive surgery. It can assist doctors to carry out a small incision, the operation of complex surgery, but also on the operation of the image analysis, to help doctors better surgery. Da Vinci appeared to make more because of the difficulty of the operation will be to lose their lives to get help.

鉬€鉬€Nanorobot: Nanorobot is small, but it can cure disease, but also to control water pollution. Scientists in 2015 will be the nanorobot to carry out clinical trials of E. coli, in the study of wastewater treatment has been a great progress. Nanorobot in the treatment of heart disease, the nanorobot will go through a diameter of 2 to 3 mm of the catheter, to enter the specific parts of the need for treatment. This catheter technique can also be used in the brain and other parts, such as the intestine and the urethra. The most difficult to enter these parts is to achieve a high degree of accuracy. For this reason, nanotechnology has long been hailed as the most ideal weapon against cancer in the future.

鉬€鉬€These are artificial intelligence for our life brings convenience embodiment, there are a number of other robots, such as, able to take weight and drive the robot and soon.

鉬€鉬€These days the big star of the "AlphaDog", it than our powerful is its operability, it is not beyond the human mind! And some occupations cannot be replaced by robots, such as the need for human inspiration and creativity of the designers, to experience life and emotion of the teacher, the need for good or bad judgment of lawyers, and soon, artificial intelligence is not a panacea. I believe that one day the big white will go down the screen to come to people's side, become an indispensable human good friends, and like the terminator that the evil, will always remain on the screen.

鉬€鉬€How Will AI Affect Our Life The artificial intelligence, such as a computer that thinks like a human being is scary. When it comes to this issue, different people offer different views, some people think that machine has feelings like human beings

sinterestinganditmaybeabettservertohuman;whiletheotherthinkitisdangerous,itmaycausesarevolt.

鉅€鉅€Inmyopinion,Weshouldnotbeafraidofartificialintelligence.Itisthescienceandtechnologyrevolutionthatmakethemoderncivilization.IetmetalksomeadvantagesofAI.Ontheonehand,AImakesoursocietymuchricherthanbefore.BecauseAImakeshesamelaborscanproducemoreproductsinthesametime.Ontheotherhand,Computeristhemostcommonartificialintelligenceproducts.Withoutcomputer,wemaynotknowsomuchabouttheupdatedinformationoftheworld.Withoutcomputer,scientistmaynotinventsomanyamazinginventions.InsummaryIsureAIhasbrightfuture.

possible? We are ever closer to building an AI that thinks like a human. Some people think that machine has feelings like human beings is interesting and it may be a better server to human; while the other think it is dangerous, it may cause a revolt. People who approved of human feelings machine think that oncerobot has specific feelings, such as happy, sad, anger, they might be more humanize. For example, maybe in the future a robot nanny will replace a real human nanny, who are work more effectively and without any complain. If they have real emotion, they are more perfect, and more like a company but not a cool machine. People who against human robot argue that oncerobot is more intelligent than we think, that may be a great tribulation to human beings. There has a potential risk that oncerobot is smart enough, they may be unwilling to be human, or even worse, to be the owner of the world. It is possible because they are smart and they are stronger compare with human beings. It is not sure what will happen in the future, having robot to serve for human beings is a good thing, but the issue of artificial intelligence is still controversial.

欽樅 server anymore, they may want to be legally citizens, or even worse, to be the owner of the world. It is possible because they are smart and they are stronger compare with human beings. It is not sure what will happen in the future, having robot to serve for human beings is a good thing, but the issue of artificial intelligence is still controversial.

### scene和scenery有什么区别

scene和scenery有区别为

scene释义：

n.场面；情景；景象；事件

例句：

When we climbed to the top of the mountain, we were very excited by the scene.

当我们爬到山顶时，我们为眼前的景象感到非常兴奋。

scenery释义：

n.风景；景色；舞台布景

例句：

The natural scenery caught my eyes.

自然风景吸引了我的目光。

词组：

natural scenery 自然风光

picturesque scenery 山清水秀；景色如画

scenery spot 景点；风景区

关于人工智能complete的内容到此结束，希望对大家有所帮助。
